

SLIDING/FOLDING HARDWARE FOR TIMBER DOORS

Weatherfold 4s Hardware Details

The latest in a long line of innovation, Weatherfold 4s brings numerous new and exciting features, making it the smartest choice for exterior folding door hardware.

New locking mechanism with no loose parts

The new push button locking mechanism is

a stand-out element and is consistent across all hangers and pivots. It has no loose parts that can be misplaced during installation.

Easy adjustment

For faster installation, the locking mechanism provides easy vertical adjustment. Featuring automatic locking technology, the

system self locks as soon as the push button is released, ensuring that the panel always remains set.

The only system on the market that is fully suited in four finishes, so that your Weatherfold 4s hardware will match perfectly with the rest of your hardware.

BWS1-100H

TOP END PIVOT

- Vertical and lateral
- Very easy adjustment, with push button adjustment system ensuring pins cannot drop out during operation
- Available in mortice or non-mortice
- 100kg weight capacity

199SS

SECURITY ALIGNER BOLT

- Adjustable security aligner
- Concealed component (not visible from outside when system is closed, making forced entry difficult)

BW189H
